ASPERORES DE AGUA (SPRINKLERS)

135 DEG. PENDENT or UPRIGHT BULB BRASS SPRINKLER HEAD

Listed and approved. Rugged frame, expanded wrench area. Tapered orifice prevents turbulence, provides uniform distribution throughout all pressures. Unique deflector accounts for high degree of water atomization associated with Firematic sprinklers. Operates at full volume approximately one-tenth of a second after pressure is released.

The glycerin inside the bulb has a higher **I: A:** coefficient of thermal expansion than the glass bulb. Thus, when heated, it expands faster than the glass, so the glass shatters and the water pressure pushes the retainer out the way.

Height: 2" (not including threaded section) Extends approximately 2 17/32 " from ceiling surface including 1/2 ". **Coverage:** 10' x 10' area

Activation temperature:

135° F / 57° C () Tested down to -40° F by UL. the bulb does not suffer any ill effects from cold temperatures - the glycerin inside will not allow the bulb to freeze. If one activates in cold weather, it's most likely due to the high pressures that result from water freezing in a fixed volume (e.g., the pipe).

Precio de Lista: US\$4.00

155 DEG. PENDENT BULB BRASS SPRINKLER HEAD

- [UL](#) listed and [FM](#) approved.
- Rugged frame, expanded wrench area.
- Tapered orifice prevents turbulence, provides uniform distribution throughout all pressures.
- Unique deflector accounts for high degree of water atomization associated with Firematic sprinklers.
- Operates at full volume approximately one-tenth of a second after pressure is released
- **Temperature: Activation:** 155° F / 68° C ([red bulb](#))
Tested down to [-40° F](#) by UL. **Note:** the bulb does not suffer any ill effects from cold temperatures - the glycerin inside will not allow the bulb to freeze. If one activates in cold weather, it's most likely due to the high pressures that result from water freezing in a fixed volume (e.g., the pipe).
